

DecodeLabs Data Analytics Internship

Project 1 - Data Cleaning & Preparation

Student Details

- Name : Kulkarni Ajanth Rao
- Internship: DecodeLabs Data Analytics
- Project: Project 1
- Tool Used: Python (Pandas,numpy)
- Date : 13/07/2026

Dataset Summary

Metric	Value
Rows	1200
Columns	14
Initial Missing Values	309 (CouponCode)
Duplicate Rows	0
Duplicate Order IDs	0

Change Log

ID	Description	Impact	Status
CR001	Identified missing values	309 missing CouponCode values detected	Completed
CR002	Filled CouponCode with 'No Coupon'	Missing values removed	Completed
CR003	Audited duplicate rows	No duplicate rows found	Completed
CR004	Verified OrderID uniqueness	All Order IDs are unique	Completed
CR005	Converted dates to ISO 8601	Standardized YYYY-MM-DD format	Completed
CR006	Trimmed whitespace & standardized text	Consistent text values	Completed
CR007	Rounded numeric values	2-decimal precision maintained	Completed

Verification Results

Check	Result
Missing Values	0

Duplicate Rows	0
Duplicate Order IDs	0
Invalid Dates	0
ISO 8601 Date Format	Pass
Text Standardization	Pass
Numeric Precision	2 Decimal Places

Conclusion

The dataset was cleaned successfully using Python (Pandas). Missing values were handled using an appropriate imputation strategy, duplicate records and unique identifiers were verified, dates were standardized to ISO 8601, text fields were standardized, and numeric values were rounded to two decimal places. The dataset meets the Project 1 verification criteria.
